

Dept Number	CS 416	Course Title	Compiler Construction							
Semester Hours	3	Course Coordinator	Henry Hexmoor							
Catalog Description	Introduction to compiler construction. Design of a simple complete compiler, including lexical analysis, syntactical analysis, type checking, and code generation.									
Textbooks										
<ul style="list-style-type: none"> • Compilers: Principles, Techniques and tools by Al Aho, Ravi Sethi, and Jeff Ullman, Addison-Wesley, 1998. • The Theory and Practice of Compiler Writing by J. P. Tremblay and P. G. Sorenson, McGraw-Hill, 1985. 										
References										
Course Learning Outcomes										
<ul style="list-style-type: none"> • To learn the principles of compiler design and implementation. 										
Assessment of the Contribution to Program Outcomes										
Outcome →	1	2	3	4	5	6	7	8	9	10
Assessed →	X	X	X	X	X	X				
Prerequisites by Topic										
306 and 311 each with a grade of <i>C</i> or better.										

Major Topics Covered in the Course

1. Basic ideas: phases of a compiler, compiler construction tools {2 classes}
2. Language and grammars: basic concepts, classification of grammars (type 0, 1, 2, and 3), reduced grammars and extended BNF notations, regular expressions {4 classes}
3. A simple one-pass compiler: syntax definition, scanner, parsing, syntax directed translation, symbol tables, semantics and code generation {3 classes}
4. Lexical analysis: regular expressions, finite state acceptors, conversion algorithms, token specification, scanner generator (LEX) {6 classes}
5. Syntax analysis: top down parsing, recursive descent and predictive parsers, LL(1) grammars, bottom-up parsing, simple and operator precedence grammars, simple LR parsing, introduction to LALR and canonical LR parsing {6 classes}
6. Type checking: a simple type checker, type conversions {3 classes}
7. Symbol tables: symbol table organization for both block structured and non block structured languages {3 classes}
8. Run-time storage organization: dynamic storage allocation strategies, access to nonlocal names, parameter passing, heap storage {4 classes}
9. Intermediate codes: intermediate languages, quadruples {3 classes}
10. Code generation: issues in code design, target machine, register allocation, simple code generator {6 classes}
