| Course Learning Outcomes  |   |     |                  |             |             |             |         |  |  |
| Deeper understanding of algorithm design.   |   |     |                  |             |             |             |         |  |  |
| <ul> <li>Deeper understanding of algorithm design.</li> <li>To learn the design techniques for efficient algorithms.</li> </ul>                                 |   |     |                  |             |             |             |         |  |  |
| <ul> <li>To learn the methods for analyzing the complexity of the algorithms.</li> </ul>  |   |     |                  |             |             |             |         |  |  |
| <ul> <li>To design algorithms with an emphasis on proving the correctness and proving the optimality in terms of time efficiency.</li> </ul>                    |   |     |                  |             |             |             |         |  |  |
| <ul> <li>To learn the basic concepts of NP-completeness and approximation algorithms.</li> </ul>  |   |     |                  |             |             |             |         |  |  |
| Assessment of the Contribution to Student Outcomes  |   |     |                  |             |             |             |         |  |  |
| Outcome →   | 1   | 2   | 3                | 4           | 5           | 6           | 7       |  |  |
| Assessed →  | X   | X   | X                | X           | X           | X           | X       |  |  |
| Prerequisites by Topic  |   |     |                  |             |             |             |         |  |  |
|   |   |     |                  |             |             |             |         |  |  |
| CS 330 with a grade of C or better or graduate standing.  |   |     |                  |             |             |             |         |  |  |

| CS 45                              | 5 Advanced Algorithm Design and Analysis   | Page 2          |  |  |  |
|------------------------------------|--|-----------------|--|--|--|
| Major Topics Covered in the Course |  |                 |  |  |  |
|                                    | Mathematical preliminaries: principles and examples of algorithm analysi relationships, worst case analysis {4 classes}                                    | s, recurrence   |  |  |  |
| 2.                                 | Asymptotically tight bounds: lower/upper bounds for finding minimum and sorting analysis, growth rate of various functions {4 classes}                     | , lower bound   |  |  |  |
| 3.                                 | Divide-and-conquer: merge sort, quick sort, median selection, polynomial algorithm algorithms, shortest distance, fast Fourier transform (FFT) {8 classes} | ns, and matrix  |  |  |  |
|                                    | Greedy algorithms: elements of the greedy strategy, minimum spanning tree, short of optimality{5 classes}  | est path, proof |  |  |  |
| 5.                                 | Advanced graph algorithms: bi-connected components, strongly connected com algorithms {5 classes}  | ponents, flow   |  |  |  |
| 6.                                 | Dynamic programming: optimal secondary structure prediction, optimal search trees<br>string matching, Floyd's algorithm {6 classes}                        | s, approximate  |  |  |  |
| 7.                                 | NP-completeness and approximation algorithms {4 classes}   |                 |  |  |  |
| 8.                                 | PRAM algorithms {4 classes}  |                 |  |  |  |
|                                    | When course is taken as 500-level credit (CS 591 "Special Topics"), t nal requirements such as a research project.   | here will be    |  |  |  |

Latest Revision: Fall 2020
